

BOOKLET-FORMING MACHINE

Abstract of the Disclosure

An apparatus and method of forming a booklet having product information printed thereon is disclosed. The method may include: (a) providing a profiled sheet of paper having product information printed thereon; (b) applying an adhesive to a sheet of paper having product information printed thereon; (c) folding the profiled sheet after (b) by making a plurality of folds in the profiled sheet; (d) coupling one or more removable tabs together after (b) to maintain a plurality of inner sheet panels in a substantially closed position and/or (e) removing first and second folded edges of an intermediate article after (c).
